# Part 20

# **FINANCE**

The finances of global Christianity, AD 1900-AD 2001

Leaders of Israel, the people must bring you one sixtieth of their grain harvests as offerings to me. They will also bring one percent of their olive oil.

—Ezekiel 45:13-14, Contemporary English Version

These people think religion is supposed to make you rich.
—1 Timothy 6:5, CEV

The love of money causes all kinds of trouble. Some people want money so much that they have given up their faith and caused themselves a lot of pain.

—I Timothy 6:10, CEV

Avoid as you would the plague a clergyman who is also a man of business.

—Jerome (AD 345-419)

A basic resource in any Christian activity is money—money collected, and money spent. In the Christian world, money is accounted for-raised, collected, counted, banked, audited, published—with more exaction and precision, usually to the last cent, than any other resource.

Part 20 draws on Christian financial statements of several kinds to arrive at one overall statement of annual income and annual expenditure of global Christianity. These exact procedures followed in almost all churches show that huge sums are regularly embezzled by top custodians.

The data also enable analyses of the cost-effectiveness of

Christian activity in each country of the world.

# The finances of global Christianity, AD 1900-AD 2001

This Part 20 discusses and analyzes Christian financial resources at the global level and asks how extensive they are today and how effective they are for today's global mission.

### MONEY IN THE BIBLE

# The example of Jesus

An obvious starting point for attempting to assess the role of money in the Bible is the example of Jesus himself. Here we are immediately faced with the stark contrast of Jesus' own lifestyle compared with that of his followers today.

Jesus did not carry money nor own any. He had no silver or gold, no cash income, no property, no stocks or shares, no current account, no savings account, no hedge against inflation, no tax havens, no financial reserves. He had nowhere to lay his head He was less well off than the foxes or the birds. He lived in poverty. But his impact on the world was enormous. He founded what was largely the original Church of the Poor, a fellowship of the oppressed, the exploited, the politically powerless, the deprived, the dispossessed. He commanded his first followers: 'Do not carry any gold, silver, or copper money in your pockets' (Matthew 10:9, GNB). Today he has 2 billion followers who receive annual incomes totaling US\$15.2 trillion and who own two-thirds of the earth's entire resources. On this basis, global Christianity has become overwhelmingly the Church of the Rich. To what extent are its members having any impact on the wider world today?

The biblical importance of finance In English translations of the Bible, the word 'money' occurs extensively: 210 times in the Good News Bible, 122 in the New International Version. Often the connotation is of something unspiritual, bad, demonic: 'You cannot serve both God and money' (Luke 16:13, GNB). Jesus propounded several notable parables based on money; he dealt harshly with money-changers and money-lenders. Yet money is a necessary evil for his followers, requiring them to use it but to handle it cautiously.

Two usages of the word 'finance' demonstrate this ambiguity. Firstly, the Apostle Paul writes that its use is inescapable, since every Christian needs support: 'I did not bother you for financial help' (2 Corinthians 12:13, GNB). But secondly, Christian workers must set higher priorities: 'It is not right for us to neglect the preaching of God's word in order to handle finances' (Acts 6:2, GNB).

# Money and the command 'Evangelize!'

There are several financial dimensions to this central mandate. Part 23 'Evagelization' lists and describes some 400 dimensions of *euangelizo* in English, among which are several financial usages. Exegetes who have carefully examined the list of 51 dimensions relevant to measuring mission and evangelization cannot fail to have noticed that a number of them-38% of the total—refer to the right handling of money. The most explicit are the mandates 'Calculate the cost!' (Luke 14:28, REB, NAB, NASB), 'Check the money!' (2 Kings 12:11, REB, JB), 'Weigh the silver!' (2 Kings 12:10, REB), and 'Total up the spoils!' (Numbers 31:32, NRSV). There are numerous other financial imperatives such as add, calculate, count, estimate, manage, register, sum, write. All of this implies that in order to evangelize, Christians must utilize money accurately, honestly, and disinterestedly for the good of all. The reason, clearly, is that money plays an essential role in the operation of God's work—the human side of the life of the churches, the global human task of world mission.

# TODAY'S GLOBAL STATUS

Not surprisingly, money plays an important role in religion, religions, Christianity, confessions, denominations, churches, missions, and even in evangelism. It therefore occupies a central role in implementing human responsibility for evangelizing today's world. But first, a glance at the wider role of money in secular usage will reveal how widespread the wrong use or misuse of money is.

### The world of billions squandered

Each year in today's world, billions of dollars are. from the Christian standpoint, recklessly wasted. We are all familiar with the appalling global squandering of resources going on around us throughout the twentieth century, in most of which Christians individually and corporately have been deeply involved. These involve the environment and pollution, forests and desertification, oil, coal, minerals and other energy sources. Major resources are the 10 million species on earth (20 % nearing extinction), and, most importantly, the human populations themselves. The total cost of wasteful actions and policies in these areas is enormous.

Then there are the vast annual expenditures on causes to which Christians are either fundamentally opposed, or hostile, or at any rate cool. International and national crime, especially of the organized varieties, is known to involve over US\$750 billion each year. Of this, illicit drug traffic accounts for some \$250 billion. In the United States the two most lucrative forms of crime cost the following: \$25 billion a year on the cocaine industry (1982 figure), and \$44 billion a year on white-collar thefts such as fraud and computer crime (1977 figure). Criminal justice to combat these activities costs United States taxpayers over \$26 billion in 1979 alone. In addition, several times as much as these sums goes on the less criminal activities of graft, corruption, and embezzlement each year. Further, there are scores of lesser examples of squandering when considered in the total world context. The USA documents its total expenditure in the most detail, hence provides most of the concrete examples and comes under the most scrutiny (and fire). There, dog owners spend \$3.2 billion each year on their dogs tobacco products sold rose from \$16.7 billion in 1970 to \$20.4 billion in 1980; and alcoholic beverages consumed rose from \$22.4 billion to \$42.8 billion over the same period. A high percentage of the persons involved are Christians of one persuasion or another.

But the best-documented mass squandering of re-

sources, in the view of many thinking Christians, is the arms race linked with the global military-industrial complex. Worldwide military expenditure rose from \$236 billion in 1969 to \$480 billion in 1978 and \$1 trillion in AD 2000. Of this, 35% was spent by the United States, and 25% by the former U.S.S.R. It is known that some 500,000 scientists (50% of the world's one million), including many Nobel Prize laureates, are involved today in military and defense expenditure, together with 100 million employed citizens working under national ministries of defense. By AD 2000 this expenditure on the arms race reached over \$165 a year for every man, woman, and child on earth. Over 60 million Christians—employees, employers, scientists, government leaders—are deeply involved in this issue, since their whole livelihood stems from it.

# The world of billions in poverty

By contrast, some 46% of the world, or 2.8 billion people, live in varying degrees of poverty. They eke out a living in twenty-six countries, each with a per capita income of under \$235 per year. This sounds bad enough, but the full picture is much worse. The world today has some 1,090 million persons living in absolute poverty, each with an income of less than \$90

a year. This is one-third of the entire developing world, the Third World; to it must be added 150 milthe World Bank, absolute poverty in China. As defined by the World Bank, absolute poverty is a clearly defined category that represents 'a condition of life so characterized by malnutrition, illiteracy and disease as to be beneath any reasonable definition of human decency.' With each month that passes, these totals increase as the gap between affluence and poverty widens almost everywhere.

Worldwide, absolute poverty is overwhelmingly concentrated in the rural areas of developing countries. It has many dire consequences, centering on a chronic lack of the basic necessities for survival. Among these consequences: 1.3 billion human beings remain without adequate shelter; landlessness and mass unemployment are rampant; 2.2 billion do not have access to adequate water supply; some 50 million are temporarily displaced or permanently unsettled refugees; 991 million adults are illiterate with no access to literature; 1.2 billion have little or no access to schools; 1.5 billion have no access to medical care; 800 million people (20% of the Third World, and up to 33% in several countries) suffer from inadequate and uncertain diet and thus from severe protein-calorie malnutrition; and some 1.2 billion human beings on earth are hungry or malnourished.

This catastrophic state of affairs is to some extent a direct consequence of the blatant misuse of resources sketched in the preceding section. The predicament of the 2 billion 'have-nots' (the poor) is a damning indictment of the diversion or even theft of trillions of dollars over the years by the 2 billion 'haves' (the rich). From another point of view, however, the blame rests on mismanagement and corruption on the part of many Third-World governments. Symptomatic of this is the enormous mushrooming of worldwide national debt, from \$100 billion in 1970 to \$1.6 trillion by AD 2000, now owed to banks in the Western world by over twenty-five developing and Communist-bloc countries. The great majority of this is owed by solidly Christian countries: Brazil (\$100 billion), Mexico (\$90 billion, Argentina (\$65 billion) Venezuela (\$35 billion), Poland (\$40 billion), Philippines (\$17 billion). In fact, some 87 % of this world debt is owed, corporately or nationally, by Third-World or Communist-world Christians to Western Christians. Servicing these massive debts alone obliges them to pay over \$100 billion a year. In comparison with such sums, North-South aid formally given by rich countries to the Third World remains little more than a drop in the bucket. In this context, let us investigate where the Chris-

tian world and its mission stand today. How large are their resources?

# A global table of resources

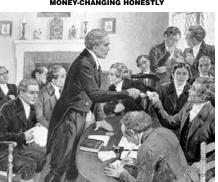

There are various types of Christian resources. Clearly, the main one is the basic one: people. Human beings won to the service of Christ and their fellow beings are undoubtedly the main Christian resource. Subsidiary resources may be listed as follows: workers (full-time personnel), missionaries, scriptures, books, literature, periodicals, libraries, institutions, service agencies, organizations, broadcasting, et alia. An attempt at tabulating these for each of the continents of the world across the twentieth century was given in Global Table 12 in the 1982 World Christian encyclopedia, with an updated version for AD 2000 given here as Table 20–1.

# THE INCOME OF GLOBAL CHRISTIANITY

In this article we are investigating only one of these resources, finance, and only one aspect of Christian finance, namely, money received and money donated each year by the entire world community of all Chris-

Methodological notes

a. Limits of the above table. This table deals, not with static wealth but with the annual movement of Christian financial resources by individual Christians and their churches and tic wealth but with the annual movement of Christian financial resources by individual Christians and their churches and agencies. It refers mainly to the first, or initial, level of Christian finance, i.e., to live Christian stewardship, which means ongoing financial resources in the pockets of today's Christians and the amounts that they donate each year. The table includes endowments, bequests, state support, political support, business support, and other forms of Christian income and the secondary and subsequent levels of Christian finances such as the activities of funding bodies that circulate or otherwise spend the money donated by Christians.

b. Variables shown. The 40 variables shown from line 6 down are suggestive and selective rather than comprehensive. The full listing of all financial variables likely to be useful to mission strategists approaches 100 or more. The fuller computerized version of this table incorporates the second and subsequent levels of giving. Definitions of financial variables. These largely follow World Bank usage.

c. Continents. Our usage here follows that of United Nations agencies, which divide the world's 238 countries into 6 major areas' (equivalent to continents) and 21 'regions'. The UN does not include Antarctica; we do, but not in this particular table. Our terms ('Africa', etc.) are therefore defined as in UN publications. Note that continental comparisons are complicated by conflicting definitions: e.g., the World Bank defines Turkey as in Europe, and Indonesia with Oceania, whereas UN agencies define both countries as in Asia The

UN defines Azerbaijan and Armenia as in Western Asia; the Ethnologue (WBT/SIL) defines them as in Europe. This kind of idiosyncratic usage means that no one uses, or can use, the others' databases.

d. Amounts of money. All amounts are given either as bild. Amounts of money. All amounts are given either as bilions of US dollars per year or as millions of US dollars per year or as millions of US dollars per year, or as dollars per year or per week. Numbers follow USA usage: a billion is 1,000 million (in German, French, and British English: 1 Milliarde, or milliard) and 1,000 billion is a trillion (in German, 1 Billion; in French and British English, 1 billion). e. Constituencies involved. The first 3 lines refer to the total population of the whole world. All remaining lines, where unindented, refer to the totals of or for all affiliated Christians. Church members in all confessions. Lines indented refer to.

(church members) of all confessions. Lines indented refer to subdivisions (e.g., Roman Catholics, Protestants).

f. Giving. This term refers here mainly to 'live giving', i.e.,

, noney given or donated per year or per week by living Christians (though it includes bequests). Christian giving to secular causes is included only in nos. 20 and 21. In all other lines, Christian giving refers exclusively to giving to specifically Christian causes, which means to churches, denominations, parachurch agencies, or to individual Christian workers or groups

or causes. g. Tithing. Potential Christian giving (line 18) refers to what would be given if all Christians tithed (gave 10% of all personal income). Several communions do this strictly. h. Past giving to missions. The global total of giving to Protestant and Anglican foreign missions in the year 1800 is estimated to have been US \$75,000, and in the year 1900 to

have been US \$19,100,000 (both at 1900 values of the dollar). In terms of AD 2000 dollars (each worth only 6 cents of the 1900 dollar) these sums are respectively \$2 million and

the 1900 dollar) these sums are respectively \$2 million and \$320 million.

i. Surveys of giving. The most exact annual surveys of giving come from the USA. Total official or publicly recognized giving to charities there—secular and religious—has risen steadily each year from \$6 billion in 1955 to \$39.6 billion in 1978, of which 46.5% (\$18.4 billion) was then classified as giving to 'Religion' (Giving USA: Annual Reports, American Association of Fundraising Counsel, New York). In 1982 the total rose to \$60 billion, and by 2000 to \$80 billion. Of all giving to charities, 81% is by individuals. These well-defined and thorough annual surveys do not however cover the total extent of Christian giving, omitting as they do much anonymous or private or secret or unheralded giving, or unofficial or spontaneous or unplanned or one-time acts of charity to individuals in need, beggars, family members, or acquaintances, et alia. Polls. The Princeton Religion Research Center (Gallup) and Christianity Today publish poll results covering percentage of income donated in the USA. Thus 16% of USA residents give 10% or more to all causes, 13% give between 5–9%, 33% less than 4%, and 26% give nothing. Denominational giving. Total donations from their own church members are published annually by many denominations (see 'Yearbook of American and Canadian Churches, annually).

tians. Starting with United Nations and World Bank data, it has been possible to build up a computerized global table of Christian financial resources. This table is given in detail for all countries in the World Christian database, AD 30-2200. We shall now comment on some of the figures there, at the same time showing how further figures can be derived by simple arith-

metic, depending on what the reader is interested in. Numbers in parentheses following the headings be-low refer to numbered rows in the listing shown here

Christians' personal income and lifestyle (nos. 3,6) The first three lines of the table show the world distribution of population, total income and income per person. Average income at the world level is around \$4,770 per person each year. Because Christians are concentrated in the Western world, their average income (no. 6 divided by no. 5) is far higher at \$8,050. Non-Christians average only \$3,280 (subtract no. 6 from no. 2, then divide by the sum of no. 1 minus no. 5). Since lifestyle depends on income, Christians across the world can be seen to live on average at a level about 2.5 times higher than non-Christians.

TWELVE ASPECTS OF FINANCE—captions for photos opposite
These illustrations show aspects of the church's daily encounter with money. Details of each are as follows.

1. Money-changing challenges Christians to observe total honesty. (The Money Changers', stained glass in Le Mans Cathedral, AD 1240).

2. Christ driving the Tradders from the Temple', El Greco (1541-1614).

3. From the move rock opera Jesus Christ Superstar'; a modern version of Christ evicting the money-changers.

4. Founding of the Baptist Missionary Society, 1792: Andrew Fuller passes his snuff box and raises £13-2s-8d (\$20).

5. Children's church procession in Rwanda, offering money, tithes, other valuables, teaching stewardship of money and possessions.

6. First annual board meeting of newly-formed Bible Society of Eritrea, in Asmara, 1992.

7. Switzerland postage stamp honoring Salvation Army for its work as major fund-raiser for Christian social services.

8. Church treasurers worldwide number 6 million; here, new treasurer (left) posses with pastor of Life Messengers Mission, Uganda.

9. Brisk sales in Bible House, Manila, Philippines, moving 14 million scriptures each year.

10. In huge Kimbanguist openair service in Congo-Zaire, ushers line up to carefully empty offertory baskets into larger bowls; all aspects of handling monies are observed by many officials and witnesses at every stage.

11. Bibles printed at Amity Press are shipped out of Hefel Distribution Center, China, with vastly cheaper transport costs than in Western world.

12. Most large churches and agencies require 2 signatures on bank checks; in Nairobi, witnesses in AlCN watch signing process.

# 260 million Christians in absolute poverty

So much for the averages. There is a further factor, however: income distribution is so unequal that, whereas 52 % of all Christians live in affluence and a further 35 % are comparatively well off, 13 % live in absolute poverty.

The degradation and agony of absolute poverty

are thus shared by millions of our fellow Christians. Some 100 million Christians live in the world's twenty-six poorest countries. In all developing countries, Christians living in absolute poverty number some 260 million. This is 24% of the world's 1,090 million absolutely poor, as well as 13% of all Christians. Of these, half live in Latin America, a third in Africa, the rest in South and Southeast Asia. This is what we usually mean by the 'Church of the Poor'. By the world's standards, they have nothing. Today a vast literature has been building up on their predicament from the theological and biblical standpoints.

How 'poor' is the Church of the Poor? Here we

meet a strange paradox. On the one hand, the answer is: shockingly, appallingly, scandalously, outrageously poor. It is surely outrageous that 1,040 million affluent Christians can continue to allow 260 million brethren in Christ to exist in abject poverty year after year, or even worse to starve to death in full view. But from another point of view, the answer, surprisingly, is that this church is largely financially self-supporting, and that it has huge potential financial resources right there amid its membership. The personal income of the 260 million looks bad enough when expressed as an average of \$100 per person per year, but in aggregate it amounts to the huge sum of \$26 billion each year. Their churches operate on income of well over \$300 million a year, enough to run major relief programs of all kinds.

Again, the major problem is that distribution is grossly unfair. In the 'churches of the poor,' that is, in the actual denominations to which the 260 million belong, they exist in close proximity to some 30 million relatively affluent co-citizen, elite, fellow Christians above them. These include the hierarchies of church leaders who control the churches, few of whom are poor and a number of whom have become very rich since taking office. Regrettably, these 30 million show less concern for the poor than many of their co-religionists in the Western world.

Yet another side of the paradox is that this Church of the Poor is poor only in material goods. They are far from being spiritual paupers. Spiritually, it is the Church of the Rich. Some of the richest and most dynamic forms of Christianity today, and the most rapid church growth, are to be found in these areas of material poverty and destitution. Within this Church of the Poor we count the 50 millions involved in the Charismatic and Neocharismatic Renewal throughout India and South Asia; the 466,000 base ecclesial communities (or, the Iglesia Popular) in Latin America; and the entire 80-million-strong African Indigenous Churches movement among Africa's lowest so-cial classes. This Church of the Poor is the only part of global Christianity whose lifestyle is similar to that of Jesus on earth. They are the only Christians who are able with complete accuracy to proclaim, with the apostle Peter (Acts 3:6): 'Silver and gold have I none; but such as I have give I thee: in the name of Jesus Christ of Nazareth, rise up and walk!'

# CHRISTIAN FINANCIAL RESOURCES

# Personal income of Christians

What about total resources? How much in aggregate are the world's 1.9 billion church members worth each year on the world scene, considering here only the aspect of financial income? The answer is easy to compute, but startling to comprehend: \$15.2 trillion. The largest slice of this (46%) goes to Europe, the next (37%) to North America. The influential worldwide community of Evangelicals alone have personal income totaling just under \$1 trillion a year. All this looks impressive. It looks less satisfactory when its uses are expressed in percentage terms, as we shall shortly do.

Stewardship and tithing (nos. 17-36)
So much for the individual and aggregate personal income of Christians. How much do they give away each year? In theory, many confessions and communions assert that Christians should tithe, which means give away 10 percent of their income. If all did this, the total would be \$1,520 billion a year. In practice, they give a third of this—something like \$320 billion, if we include every kind of Christians. But it makes more sense here to restrict the definition of 'Christians' to all affiliated church members. In this case, their annual donations total \$298 billion. Forty-six percent of this comes from Europe, 37 percent from North America. Africa contributes a mere 1.3 percent, Asia 3.9 percent.

Where does all this money go? (nos. 19-24) Now we examine what happens to those massive

Who are the immediate beneficiaries of all this wealth? A few percentages can answer this question Though Christians number only 33% of the world population, they receive 53% of the entire world's annual income—and spend 98% of it on themselves. Put this way, it is shocking. Put another way, each year North American and European church members spend \$12.5 trillion on themselves personally and on their families. The Church of the Rich (the 'Middle-class Church') is at heart a selfish and a self-serving

Of the remaining 2% of Christians' income, a meager 0.2%, or \$27 billion a year, is given or donated to secular or non-Christian causes and charities; and about 1.8%, or \$270 billion a year, is given or donated directly to Christian causes. This latter sum forms the vast bulk of what the churches and parachurch agencies across the world receive to run the worldwide Christian church and its annual operations.

# Giving to secular causes (no. 21)

These figures in the preceding paragraph can be rearranged to convey a much more favorable perspective. Christians support their own religion financially, as one would expect; but they also give 10% as much again to secular charities (famine relief, hospitals, handicapped programs, cancer research, etc.) or even to non-Christian causes. Christians are heavily in-volved in financial support of social and develop-ment programs in the world beyond or outside the boundaries of the churches. This is surely greatly to their credit.

The actual breakdown by category is instructive. In the United States, some 14% of all giving by Christians goes to secular education, 13.4% to health and secular hospitals, 9.9% to social welfare, 6.2% to arts and the humanities, 2.8% to civic and public services, and 7.1% to other secular causes. The remaining 46.4% is spent directly on religion and religious causes, which in the United States context means largely Christian causes

*Giving to Christian causes (nos. 22-24)*Before the year 1900, over 90% of Christian giving was channeled through the churches and denominations. A modest 10 percent supported the Bible societies and missionary societies. But the twentieth century has seen the emergence on a massive scale of over 40,000 distinct new parachurch agencies whose finances are independent of the churches. This ought to be regarded by older denominations and agencies, not with envy or jealousy but simply as the latest development in the long history of where Christian wealth is concentrated. Unfortunately their attitude often resembles that of the older brother in the parable of the Prodigal son (see Luke 15). Be that as it may, in 1980 36% of all Christian giving to Christian causes was regularly bypassing the churches and denominations; by 1995 this had risen to 60%. In consequence, giving to denominations in many countries is declining at an alarming rate. One major example and cause of this that springs to mind is Christian broad-casting. Nonexistent in 1900, by 1977 religious broad-casting in the United States alone accounted for \$500 million as the cost of broadcast time. On the world scale the total cost of Christian broadcasting is over three times larger, around \$2 billion in 1982, sky-rocketing to some \$6 billion by AD 2000.

# Giving to denominations (no. 23)

All this is bad news for the world's 33,800 Christian denominations. Their once unchallenged hold on their members' giving, and their appeal as worthy causes are dwindling. While their members do not reach the widely taught stewardship target of tithing (giving 10% of personal income), nevertheless they do average 2% of income. But a tenth of this is given to secular causes, and another 55% to parachurch organizations, leaving only a third for the operation of the denominations and local churches themselves. And their third is rapidly declining.

# Individual giving (nos. 37-45)

These huge sums of money become more intelligible when reduced to what the average individual contributes. On the world level, the average church member gives \$143 a year (which is \$2.75 a week). As one would expect, individual giving is highest in the

strongholds of the Church of the Rich (the affluent West)—\$466 a year in North America; is much lower in the strongholds of the Church of the Poor in Asia (\$34 a year) and in Latin America (\$59 a year); and is lowest of all (\$11 a year) in the Church of the Absolutely Poor in the continent with the lowest percapita income of all, Africa.

#### THE INCOME OF ORGANIZED GLOBAL CHRISTIANITY

The sheer magnitude of money available to Christians and their churches and agencies is starkly revealed in Table 20-2. This ranks all countries of the world by the personal income of Great Commission Christians (column 8).

As will be seen from Table 20–2, huge figures result when we compute any large country's or church's income. Contrary to popular stereotype, many denominations in the Third World, even in areas of abject poverty and neglect, generate vast annual income. Thus the Kimbanguist Church of Zaire ((EJCSK) has (using AD 2000 figures) 9.5 million members handling \$2 billion in personal annual income, of which they donate over \$20 million to their denomination annually. In South Africa, Zion Christian Church's 7.2 million members have personal income of \$21 billion, from which the ZCC gets a church income of \$200 million. The largest Third-World denomination, the Assemblies of God in Brazil, has 19 million members, personal income of \$57 billion, and church income averages \$1 billion a year. Lastly, China's 89 million Christians have personal income of \$49 billion of which \$2 billion is donated to and used by their churches.

Let us now analyze this income for organized global Christianity, and see how it is expended.

## A GLOBAL BALANCE SHEET

It is possible here to give a simplified annual balance sheet, or overall budget, listing the main expenditures on the part of global Christianity. The current cost of items is approximately as follows shown in Table 20–3.

# Enough silver and gold to tackle any task

Enough storer and gold to tacket any task. Altogether, it is not surprising that aggregate totals turn out to be staggeringly high. Table 20–3 shows that the annual income of organized global Christianity reaches \$270 billion. Of this, denominations and churches receive \$108 billion. But even this monumental sum is surpassed by what the paradenominational bodies and continuous experies region. \$142 billion. national bodies and service agencies receive: \$162 bil-

The moral is clear. Christians have enough money to implement even their wildest dreams of worldwide ministry and global evangelization.

#### THE EXPENDITURES OF ORGANIZED GLOBAL CHRISTIANITY

Examination of the expenditures on the balance sheet in Table 20–3, from 3 distinct and different standpoints, reveals a large number of surprises and dis-turbing comparisons. Here we deal only with a few

# First standpoint: global priorities need changing

This point of view classifies expenditures in terms of the Christian global apostolate. Some 82% of expenditure is spent on the home pastoral ministries of the churches in their home countries, the heartlands of the Christian faith—Europe, the Americas, and the rest of the 141 World C countries. Another 12% is spent on home missions in those same countries. This leaves only 5.6% to operate foreign missions. This miniscule sum, exemplified in the pitiful fraction of 0.1% directed toward the unevangelized world (World A), goes a long way toward explaining why global Christianity, which numbered 34% of the globe's population in AD 1900, numbers 33% in AD 2000.

#### Second standpoint: Christian funds are entirely adeauate

By identifying who the donors are and who the beneficiaries are, we see that the 6 major ecclesiastico-cul-

tural blocs of Christians each contributes and spends vast sums each year. Two of the largest and most dynamic of these global forces—Evangelicals, and the Pentecostal/Charismatic/Neocharismatic Renewal—each raise over \$60 billion annually. But the evidence shows that these 2 groupings only directly utilize or control the expenditure of some 20% of the income they supply. The rest is swallowed up in maintaining the vast ongoing machinery of the rest of institutionalized global Christianity. Rightly managed, a single one of these groupings could change the world.

The most intriguing figure is that our new cate-

The most intriguing figure is that our new category of Great Commission Christians—all those determined to take seriously Christ's mandate to the church—raises \$164 billion every year but directly controls the expenditure of less than 20%. Again, if they could somehow get themselves mobilized and organized, this huge trans-bloc grouping could alter the fortunes of Worlds A and B within a few months.

Third standpoint: 6 specific items need comment By itemizing some 40 separate expenditure items, this more detailed part of the balance sheet permits closer scrutiny and raises questions for the churches to pursue. Here are 6 issues in particular.

1. Administration (line 68). This accounts for 29% of

the total expenditure of the Christian world. To some observers this will appear reasonable, to others inevitable, but to others a shockingly large waste of resources.

- 2. Censuses (line 76). Every year the Christian world's churches, agencies, and institutions require their employees—bishops, clergy, pastors, lay leaders, missionaries, evangelists, teachers, administrators, et alii—to fill out a total of 10 million annual statistical reports. This is the world's largest single annual enumeration. Its total cost is \$1.1 billion. This annual gold mine of new data on the progress of global Christianity is, however, virtually unanalyzed from one year to the next. Most of these returns get archived within a few weeks of receipt at headquarters. Great Commission Christians could insist on a proper analysis and accounting of these materials.
- 3. Earthkeeping (line 61). A huge new movement within the churches has sprung up around the world emphasizing Christian responsibility for protecting and nurturing all aspects of the natural environment. At an estimated \$3 billion, this is one of the most positive new expenditures. The major initiatives to date have come from within the 80-million-member African Independent Churches, especially in South-

ern Africa.

- 4. Ecclesiastical crime (line 79). This item describes theft of Christian funds (embezzlement) by directly-responsible church officials or treasurers appointed to handle churches' and agencies' monies. It will be enlarged upon shortly below.
- 5. Audits (line 71). Professional financial audits are estimated to cost the Christian world \$810 million a year. (See comment 'Cost of audits' below).
- 6. Computers (line 88). A last comment concerns the mushrooming costs, to the Christian world, of computer hardware, software, personnel, and online charges. It is estimated that Christians now own and operate 350 million general-purpose computers that cost them \$400 billion to purchase—a staggering diversion of traditional church and other Christian monies

# Rich and Poor contrasted

A more generalized comment concerns how compartmentalized and unconnected the Christian world is. Thus although 260 million Christians in Third-World countries are living and dying in absolute poverty, many local churches in Europe and North

America continue to spend 7-figure sums on new organs, sanctuary extensions, and the like. In the Western church, denominational spending on property increases year by year. Thus the value of new construction of religious buildings in the United States (again, the best-documented country) rose from \$0.9 billion in 1970 to \$1.6 billion in 1980 and to well over \$5 billion by AD 2000. There, certainly, we see over-whelmingly the Church of the Rich. Yet, again para-doxically, the Church of the Poor exists in parallel in the United States, mostly as a Black or a Hispanic urban phenomenon. Even here, though, 'Church of the Poor' is a relative term, since the poor as officially defined in the United States have per-capita incomes over sixty times greater than the absolutely poor in the Third World.

*Global foreign mission* (lines 23-26) It is in its global religious outreach that the Christian world seems least certain of itself and of its mission. Only 5.6% of global Christian giving (\$15 billion a year) goes to support the Christian world mission. Outreach, foreign service, evangelism among non-Christians, conversion, new and experimental types of mission and ministry, translation of the Scriptures into non-Christian languages—these attract the least money. The remaining 95% of global Christian giving (\$255 billion a year) goes on the home church and its ministries at home. The average church member, donating his \$2.75 a week, gives out of this only \$0.15 (fifteen American cents) to support Christian foreign missions. This indicates a very low level of commitment to the Great Commission of the Lord Jesus Christ: 'Make disciples of all nations.' In this respect, poor in spiritual dynamic and in missionary vision and obedience. the entire Christian world is a Church of the Poor-

### MANAGING GLOBAL CHRISTIAN MONIES

Some further comments on budget items in Table 20–3 can now be made.

Accountabilitu

The Christian world today has around 5 million church treasurers, of whom some 2% are full-time salaried officers. Most larger denominations, agencies, and institutions have long since instituted strict accountability, accounting, accounts, accountants, audits, procedures, financial reports, and balance sheets that report their financial situation to their constituencies of church members, donors, treasurers, and law officers. Churches which relax this vigilance soon pay dearly for their negligence.

Embezzlement (line 79)
As described in Table 20–4, the annual total of \$16 billion embezzled exceeds the worldwide church's foreign missions' expenditures of \$15 billion. Probably 80% of all cases are kept private or swept under the carpet, but each year a rash of megathefts (over \$1 million each) is uncovered and publicized in the secular media. A sampling from 1994-6: Salvation Army (UK), \$13 million; Episcopal Church in the USA, \$2.2 million; Catholic Diocese of Brooklyn, New York, \$1.2 million; Evangelical Lutheran Church of America (New England) \$1.1 million; Mississippi Baptist College, \$3 million stolen by its president. A different type of case is the loss of \$354 million by a large number of Evangelical agencies in the USA who had placed funds with New Era which went bankrupt in

Many cases share a number of strange similarities. Culprits are usually caught red-handed, are often trusted national treasurers or even bishops or other denominational heads, and have usually been si-phoning off monies for 5-10 years or more, before being detected. In many cases the first rumors are categorically denied by church leaders. When the first newspaper story appears it often contains an appeal by the bishop or denominational head urging the immediate Christian grace of compassion and forgiveness toward the embezzler. This suggests to readers that the leaders concerned may well have been in-volved themselves in the theft, or are concerned for their own reputations as managers. Another recurring feature is that often the body concerned is for-tunate enough to recover the loss through insurance, seizure of cars and houses. In such cases, as when the Salvation Army (UK) actually recovered \$13.2 million, instead of being a dire warning of tragic loss it becomes a success story of smart action by administrators after the event.

One way or another, Christians need to tighten up the scrutinizing of all funds holding their monies and to insist on all the accepted safeguards and controls and on all the strictest procedures.

Cost of audits (line 71)

Professional financial audits are estimated to cost the Christian world \$810 million a year. On learning that this figure is 3 times the cost of Christianity's 2,500 evangelistic mass campaigns a year (line 60), and almost exceeds the entire cost of circulating the Scriptures throughout the globe (line 64), many Christian leaders are appalled at the imbalance. On reflection, however, they soon realize that if audit costs were reduced by one half, then in all probability current embezzlements would double to \$32 billion annually. Conversely, if tougher and stricter audits were introduced costing twice those at present, it is probable that embezzlements would fall drastically, saving the Christian world at least \$5 billion a year.

Insisting on financial controls

Two of the basic rules for safeguarding public monies are (1) there must always be 2 signatories on all checks and documents, that of the finance officer and that of the ecclesiastical head (bishop, moderator, etc), and (2) receipt of income must be handled by separate staff to those making expenditures. In most cases of mega-embezzlement it soon becomes apparent that the normal strict controls were ignored at some juncture. Often busy church leaders about to depart on extended travels will sign a number of blank checks. The most blatant invitation to theft occurred in a large denomination whose presiding bishop permitted the national treasurer to sign on his behalf and hence to provide both the required signatures herself. Huge sums can be saved by insisting on these con-

trol procedures being exactly followed

Money gets tighter

In recent years most Christian organizations have tightened up on beneficiaries and boundaries within which disbursements of their budget are permissible. Usually 95% of all denominational/agency money is spent, and can only be spent, on denominational/ agency causes, projects, and personnel. Certain time-honored obligations outside the strict denominational and confessional boundaries may be continued without being questioned—e.g. a denomination's annual donation to the American Bible Society, emergencies, disasters, refugees, famine relief. However, support or donations for countless small projects or personnel outside the boundaries have been becoming harder and harder and in many cases have dried up completely.

The absence of global sharing
From these trends it can be deduced that organized global Christianity is still a long way from any form of global sharing of resources. Its vast array of global monoliths still reserve their money virtually exclusively to themselves.

Transdenominational giving or support

Particularly hard hit have been the following. First, multidenominational causes directly and obviously benefitting the donor agency are nevertheless being cut out (note the difficulties of financing the WCC, WEF, UBS, similar to that of financing the United Nations). Second analysis and account of the United Nations of th tions). Second, smaller interdenominational causes or appeals are simply excised or ignored without explanation or reply. And thirdly, outright donations have been reduced to virtually nothing even in cases where senior executives' promises and pleas have been insistent.

The role of research and development (line 62)

One reason for this dismal state of affairs with regard to global mission is the absence of sufficient serious research on the subject. Research is essential to the prosecution of all large enterprises in the modern secular world. Most countries recognize this by allocat-ing massive financial resources to research, averaging some 2.1% of their gross national product. Many commercial and industrial enterprises allocate 5% of their total income, some as high as 10%. In 1980, the total national research-and-development expenditure on the sciences was 2.33% of GNP in the United States (\$61 billion), 2.3% in Europe (\$76 billion), and 3.47% in the Soviet Union (\$38 billion). The world total spent on research and development in 1980 was \$210 billion. Well over 90% of this is spent in, and therefore primarily benefits, the techno-economic colossi in the North of the planet (the Western world and the European Communist world). The South (the Third World) benefits only indirectly, if at all.

The result of this recognition of research is that vast sums are available to experiment in numerous new directions at once. This is an essential element in research, since in scientific or industrial applications any new line of research has only a 1:8000 chance of success. A typical case is the chemical multinational Hoechst UK. In 1982 it spent \$240 million on pharmaceuticals research. In 1983 it spent UK £1 million a day on agrochemical and related health and nutrition research, employing 13,000 people in fifteen different countries on its research program. One concrete result of this area of research is that average human male life expectancy in Britain has increased from 41 years in the year 1870 to 70 years today.

The Norwegian missiologist Olav Myklebust once said: 'What theology is to the church, missionary research is to the task of world evangelization'. In other words, it is fundamentally essential. Without adequate research, the global work of Christ and in particular its mission and outreach have often floundered in ignorance or error.

low extensive is Christian research today? Until the 1950s research has always been almost completely decentralized, relying on the voluntary and unorganized labors of thousands of scholars in all disciplines. Between them nowadays they produce some 110,000 new scholarly research books on the Christian faith every year.

Together with these individual scholars, there has grown up since 1950 a vast, loose network of 950 Christian or church-related research centers across the world. These undertake research on the entire range of Christian issues, from biblical archeology and biblical exegesis to human rights and futurological topics. Yet, since 1970 these 950 centers have been seriously undermined by drastically curtailed funding. The vast majority of denominational centers, and some 90% of all church researchers since 1970, have subsequently collapsed or otherwise gone into oblivion. Their total budgets with those of all other Christian research activity have fallen to some \$81 million a year. For global Christianity, a global organization with an annual budget of \$270 billion, this is an exceptionally small proportion: only 0.03%. Such a low outlay is shortsighted in the extreme by contemporary standards. And only a small fraction of this goes to research on global mission.

So then, we are faced with yet another shocking paradox: church members in many countries pay out of their own pockets more for secular and military re-search (\$300 billion a year) than they pay to support organized Christianity in all its forms worldwide (\$270 billion a year). The world's 1.9 billion church members pay for secular research (including that to advance the arms race) to the tune of some 2.2% of their incomes each year (involuntarily no doubt, via government taxes), yet at the same time they pay less than 0.0003% of their incomes for Christian or churchrelated research. In fact, Christians pay out of their pockets 7,000 times as much for secular research, including nuclear-weapons research, as they pay for specifically Christian research to advance the kingdom of God.

This therefore represents an urgent call to all or-ganizations professing to support the world Christ-ian mission to immediately include in their annual budgets a fixed percentage of between 5% as a maximum and 1% as a minimum, specifically for research. While this would cover research on all subjects of primary concern to the particular mission of each, it should also contain an element for genuinely international, interdenominational, interconfessional, multidisciplinary research on global mission and world evangelization. If these organizations followed the example of well-run and efficient secular bodies who have discovered that to spend 1% per year on research brings rich dividends, then each year there would be \$2 billion available for all varieties of Christian and church-related research, and \$105 million for research specifically on global mission. These are the sensible sums to spend on research for such a complex global operation.

		church or Christian funds embezzled, 1980-2000 tal embezzled, AD 2000					

Note. The table reports only a small selection of the largest sums embezzled. Cases are known to occur in almost all countries, involving sums from many millions to thousands of smaller amounts. Most cases are never noticed at all by the churches robbed. Most cases reported above are from the USA because

that country's secular press and media report such cases in detail whenever they occur. In most other countries, cases of this kind never see the light of day because church authorities gloss over them or sweep them under the carpet without publicity. Culprits. Most are never caught. Column 4 above re-

ports the alleged culprits. In only a fraction of all other cases are culprits brought to justice; 95% escape undetected. *Prison sentence*. Outcome after the courts have indicted and convicted the culprits.

### HOW COST-EFFECTIVE IS CHRISTIANITY?

How much does it cost, or how much is it costing, to actually achieve what Christians are supposed to be achieving on our globe? If it is possible to measure the extent of this achievement, or failure to achieve it, and the relevant cost involved, then this should surely be a priority duty laid upon every member of the Christian church.

#### Some definitions

First it is necessary to define exactly our key terms. Cost is 'the amount of money, time, effort, etc required to achieve an end.' The verb 'to cost' produces a costing, which means 'to estimate the cost of making a product or program, the amount of money spent in producing or manufacturing a commodity' (Websters' New World dictionary of the American language, 1996). Further, cost accounting is 'a system for recording, analyzing, and allocating production and distribution costs' (ibid). Our main adjective cost-effective then means 'economical in terms of the goods or services received for the money spent'; the related noun is cost-effectiveness (American Heritage dictionary on CD-ROM, 1996)

The Christian product sought

The starting point should therefore be to answer the question: what is the primary responsibility of Christians on the Earth? We can answer as follows. For the moment, we see the church with its 2 billion members, receiving and spending every year a vast sum of money—\$15.2 trillion by the year AD 2000. This sum is entrusted to the church, which spends it on a whole vast array of activities—humanitarian, ethical, religious, as well as specifically Christian, missionary, and evangelistic. This establishes cost.

We now need a measure of effect or effectiveness.

We now need a measure of effect or effectiveness. The church of Christ's prime responsibility is to obey the head of the church, the Risen and Ascended Christ himself, and in particular to obey his central legacy of command to his followers. This command is, by universal recognition, enshrined in Christ's Great Commission after his resurrection. We may recall again Karl Barth's dictum 'The Great Commission is truly the most genuine utterance of the risen Jesus'. For documentation on its mandate we have the 6 major New Testament passages expounded here in Part 3 "GeoCommission". Of these the clearest and most direct is found in Matthew 28:19, CEV: 'Go to the people of all nations and make them my disciples. Baptize them' (emphasis added). The command is to make disciples and the concrete measurable action is to baptize them into his body the church.

In practice, this is virtually the only directly measurable action contained in the many dimensions and facets of the Great Commission narratives. As such,

this imperative 'Baptize!' becomes a highly significant indicator and measure of the obedient discipleship of the entire body of all church members.

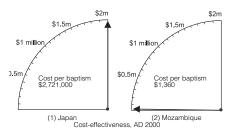

### Christian product and Christian cost

For our purposes here, then, the commodity or end product is newly baptized persons each year, and the cost is the total amount of money Christ's followers expend on everything they do during that year. So 'cost' here cannot be restricted to only the actual visible costs directly involved in the baptizing process itself. Rather, it means the actual cost of all aspects of Christian activity including scripture distribution, radio, television, computers, literature, administration, training, and all else the churches engage in.

One measure of Christianity's effectiveness, therefore, in its work in any country, people, language, city, or other grouping, is the number of new persons being baptized. Worldwide today this amounts to 45 millions a year. One measure of comparative cost-effectiveness can thus be obtained by computing the overall cost of each new person baptized. For the globe as a whole, this is \$15.2 trillion divided by 45 million, which is \$330,000 per newly baptized person.

Meanings of this new criterion

As a global average this is a staggeringly large figure. It has multiple meanings. (1) It clarifies the enormous cost of each individual won for Christ's church. (2) It reminds Christians too critical of past triumphalism that the mandate to win disciples is still central to genuine Christianity. (3) Its numerical value is portrayed here in Table 12-1, column 100, and graphically for every country in the world (in WCE Part 4 "Countries", and WCT Part 15, Table 15-3) as the last in the standardized strip of 6 minidiagrams under each Country Table 1 which is here termed Great Commission Instrument Panel. There it takes the form of an aeronautical cockpit instrument telling the pilot speed, altitude, distance gone, and the like. (4) Its greatest value is as a comparative index, showing where each country is on the entire spectrum from

the most cost-effective church (in Mozambique at \$1,360 a baptism) to the least (in Japan at \$2.7 million a baptism), as shown in the 2 minidiagrams below. The 10 top countries on this criterion, and the 10 bottom countries, are shown in Part 11 "Listings", Nos. 23-24

A failure in management

Often the blame for shortfalls in funding Christian projects is laid by management squarely on the laity, the rank and file of Christians in the churches. To the contrary, our survey has demonstrated that it is ludicrously incorrect to blame the laity who donate \$270 billion of their own money every year to support the churches and agencies. What has gone wrong is clearly a failure in management, a failure to use these massive funds wisely, strategically, and cooperatively. There are obviously entirely enough funds to pay for the thousands of worthwhile projects and operations which arise every year but which at present fail to secure proper funding and then collapse.

# A failure of vision

A concrete example of this failure in leadership concerns the computer technology known as artificial intelligence (AI). These programs are also called 'expert systems' because they replicate exactly the expertise of an expert in any subject from arranging office staff vacation times to planning landings on the planet Mars. By 1980 several large multinational companies had hundreds of these systems operating cost-effectively, and by 2000 thousands. By AD 2010 it is expected that every business and enterprise will depend on such customized systems at every level.

In 1986 the editors of the World Christian encyclopedia carried out a concerted endeavor to persuade foreign mission agencies to adopt this technology. Although spectacular results were being obtained (for example, for matching up mission job opportunities with potential new mission recruits), theological objections were raised to the very idea of 'artificial' intelligence; bureaucrats took over and killed this highly promising new Christian enterprise.

# CONCLUSION

From this examination of the money circulating in Christian circles for Christian work each year, several conclusions can be drawn. First, the terms 'Church of the Poor' and 'Church of the Rich' have many complementary and overlapping meanings. The Church of the Rich usually refers to the affluent West. It has enormous material wealth, but contains within it sizable pockets of the Church of the Poor. Spiritually this middle-class Church of the Rich is, from some aspects, a mere pauper itself and so has gradually become

looked down on by Third-World Christians as itself spiritually a Church of the Poor. Likewise, the initial meaning of the term 'Church of the Poor' usually refers to the Third World. It lives largely in absolute material poverty yet has sizable enclaves of the Church of the Rich prospering within it oblivious of the plight of their neighbors. Paradoxically this Church of the Poor has an abundance of charisma and charismata, and so has become spiritually a Church of the Rich.

Second, there is plenty of money available worldwide to meet all reasonable Christian global goals and obligations. There is entirely enough to undertake the effective prosecution of the Christian world mission. There is enough to undertake every type if research essential to the prosecution of the churches' life and mission. there is even enough to enable the Church of the Poor to break out of its vicious environment and bring out the rest of humanity with it. It is simply a question of vision, determination, challenge, mobilization, redistribution, management, in-

This assessment is not affected by temporary set-backs—world recession, shortfalls in giving to particular relief bodies, escalating inflation, fluctuating oil prices, bankruptcies among Christian in situations, even graft and corruption where they exist in Christian organizations. Even the most radical proposal of all—that Christians unilaterally implement a global redistribution of income—is a practical proposition that could have immense global repercussions. A voluntary 10% cut in income on the part of all churchmember Christians in Europe and North America could produce a 93% increase in income on the part of the entire 1.4 billion population of South Asia, or an 82% increase throughout Latin America, or a 158% increase for every soul in Africa.

Third, responsibility to act is not confined to Western Christians in their Church of the Rich. We have noted about that in the Church of the Poor, there is a combination of 30 million relatively affluent Christians on top of 260 million Christians in absolute poverty. This means that if these nouveaux-riches elites, including leadership hierarchies, redistributed their income and their wealth, they would solve much of the imbalance without outside interference or charity from the West.

Unfortunately, mere theorizing or pious exhortations are unlikely to motivate affluent Christians anywhere in this direction. Instead it is a question of research (what actually is the true situation?), then information (get your facts right), then communica-tion (let me tell you the situation), then confrontation (do you know how bad things are?), then education (we are all responsible), then persuasion (do something about it)—and then implementation.

Despite the logic of this situation, it would be unrealistic to expect the Christian community on any continent to be totally obedient to this particular heav-enly vision. Eighty-five years ago Samuel Zwemer, apostle to Islam, put it succinctly when contributing to John R. Mott's classic The Evangelization of the World in This Generation. Difficult regions like Arabia, he said, and indeed the whole world, 'could easily be

evangelized within the next thirty years if it were not for the wicked selfishness of Christians'

To a large extent, the global sharing by Christians of money, wealth, property, and goods could solve most of these problems, including those of famine, poverty, disease, unemployment, dangerous water supply, and so on. Because this is so, there is a sense in which Christians are to blame for the persistence of the present disastrous state of affairs. Every Christian with an income of over \$500 a year ought to be deeply concerned and actively involved in this problem. At the least, each should consider donating 10% of his or her income to Third-World missions or charities, or to studying, preaching, writing, teaching, or researching about the situation. Every Christian who ignores this obligation lies under the solemn judgment of God on this issue.

Several centuries ago a Roman pope who was an avid patron of the arts is said to have surveyed the vast artistic riches he had amassed, and to have vast artistic riches ne nad amassed, and to have gloated: 'No longer can the Church of Jesus Christ now say "Gilver and gold have I none". 'True, Sire,' a subordinate replied. "but then neither can she now say, "Rise up and walk!"' Material wealth has always carried the risk of attendant spiritual bankruptcy. Today's Church of the Rich, on all its definitions, has vast resources capable of reaching the entire world for Christ. But unless these resources are immediately deployed to that end, this church will ultimately prove to have had minimal spiritual impact upon the world
